

Project case study
60 Jubilee Avenue, Milton Park

Client
MEPC

Main contractor
Barnwood Construction

Location
Milton Park, Abingdon, Oxfordshire

Sector
Commercial

Contract value
£1.25 million

Products
Aluminium Schüco FW50 and
FW50SG curtain walling systems,
Schüco ADS 70 HD doors

This project involved the design and installation of the external glazed facades to a new office building at Milton Park in Oxfordshire. Our innovative design solution brought significant cost and time savings to the project.

The project was led by main contractor Barnwood Construction for commercial property company MEPC.

Britplas' scope of work included the design, manufacture and installation of Schüco FW50 and FW50SG curtain walling systems along with Schüco ADS 70 HD doors.

The scheme also features composite panels and casement windows. Together, with its sister scheme on Western Avenue,

both buildings provide over 6,000 sq m of external envelope consisting of glazing and cladding products.

Britplas developed an innovative design solution for the project which mimics the appearance of rainscreen cladding and ultimately reduced the number of trades that would have been involved in the original design, ensuring significant cost and program efficiencies.
