

PRODUCT INFO

Fortress 80 Fencing

A reliable perimeter security fencing system to both enhance and secure mental health environments.

FEATURES

- Anti-ligature, anti-tamper and anti-climb
- Enhanced or total privacy and dignity ('net curtain effect' allows good levels of visibility from within the compound)
- Ultra-strong and exceptionally secure
- Reduces passing of contraband
- Printed mesh can be used to enhance surroundings
- Can be retro fitted or installed to new build projects
- Available in a variety of heights up to 5.2 metres

A flexible solution

Anti-ligature Fortress 80 Fencing is widely used for securing mental health unit buildings, outdoor space and garden areas, providing total security and safety for patients and staff, whilst also acting as a clear demarcation area.

The fencing's cloaking allows for the overprinting of large and detailed artworks onto the surface. These artworks can be used to change the depth perception of confined outdoor spaces, providing a continuation of or a contrast with the existing landscape and creating an excellent opportunity for service user involvement.

Britplas offers an end-to-end solution, from detailed site survey and in-house design right through to fitting via our specially trained installation teams.
