

## Product information: Fortress Climb-Guard

An aluminium curved barrier system which prevents unauthorised access to low roof, walled and fenced areas.

### Features:

- A robustly engineered but simply detailed security product
- Equally suited to retrofit or new build
- Fits directly onto the building fascia and roof spars
- Provides maximum security in high risk areas
- If required, existing guttering can be replaced at the same time with our recommended deep flow system
- Finished to BBA approved polyester powder coatings

### Designed for mental health.

Britplas' aluminium Fortress Climb-Guard solution is designed to prevent unauthorised access to low roof, walled and fenced-off areas.

It is ideal for mental health environments where low roofs or other climbable features may present a danger to patient safety.

### A flexible solution.

Comprising of specially engineered support brackets and pre-formed curved barrier sections, it is suitable for all roof pitches and low wall areas and can be fitted over virtually any gutter profile, or can include an integrated guttering system.

The product is professionally installed by Britplas' own teams of specialist installers.

### Non-obtrusive.

The curved profiles are non-threatening and non-obtrusive in appearance and can be powder coated in any RAL colour.

### Quality and sustainability.

Britplas' aluminium anti-climb solution is UK manufactured and is lightweight, durable and non-corroding. It is also entirely weatherproof with a life expectancy of 40 years in rural and suburban areas and 25 years in industrial or marine areas. The product is 100% recyclable.

**“Britplas were a pleasure to deal with. Their product is very well designed and the survey and subsequent installation of the Climb-Guard went very well.”**

Nigel Slack, Quantity Surveyor, Michael Eyres Partnership LLP
